

DIAL CODES

NORTH CAROLINA

OFFICE OF EMERGENCY MEDICAL SERVICES

FOREWORD

This is the thirty-fifth year for publication of the North Carolina *Dial Codes* Directory. The paper printed booklet has not been available since year 2000 and the booklet is available only in electronic PDF format. The Dial Codes book is provided by the North Carolina Office of Emergency Medical Services to share information about EMS and hospital emergency communications within North Carolina. The listings have been for the VHF Emergency Medical Radio frequencies 155.280 MHz and 155.340 MHz as well as the North Carolina Medical Communications Network (NCMCN) UHF MED frequencies. These frequencies were designated by the North Carolina Emergency Medical Services Advisory Council for emergency medical and advanced life support (ALS) communication. Other information important for communications administrative or disaster support has been added.

We are on the threshold of a new chapter in emergency and public safety communication. The next two or three years will be tumultuous for hospital and EMS radio systems as new technologies and FCC rules become effective. The two most important changes being the implementation of the North Carolina shared 800 MHz common public safety radio network "VIPER" (Voice Interoperability Plan for Emergency Responders) and the FCC rule change that all radio systems that operate on frequencies between 150-174 MHz and 421-512 MHz convert to 12.5 kHz technology. This will require that all hospital and EMS radio systems obtain new FCC licenses to authorize narrowband operation and conversion of radio equipment to enable such operation. This must be complete by January 1, 2013, or in other words, operational in 2012.

Basically, **every EMS provider (prehospital and hospital emergency department) is potentially affected by narrowbanding and must comply with its provisions by January 1, 2013.** Because the narrowbanding rules may require the replacement of portable and mobile radios, as well as hospital and other radio consoles and other infrastructure, the need to plan and budget for these changes in the budgetary cycles of most EMS agencies and the municipalities that support us means starting now. **If you have an EMS frequency radio, this means you!** This does not affect 700 and 800 MHz systems.

Provided below are links to additional information regarding these important changes. Please read this information and become informed about the new requirements.

STATE POISON CENTER FOR NORTH CAROLINA

IN CASE OF A POISONING EMERGENCY CALL:

Carolinas Poison Center

Address: PO Box 32861
Charlotte, NC 28232-2861
Business: (704) 512-3795
Fax: (704) 512-3754

Emergency: (toll free) (800) 222-1222
(long distance) (704) 355-4000

Carolinas Poison Center

<http://www.ncpoisoncenter.org>

The Carolinas Poison Center is designated as the Statewide Poison Center for North Carolina and certified by the American Association of Poison Control Centers (AAPCC) as a Regional Poison Control Center. The Center provides emergency poisoning information to citizens and healthcare professionals throughout North Carolina. Toll free emergency phone lines are staffed by specially trained registered nurses and pharmacists who are knowledgeable about toxic substances and treatment for victims exposed to potential poisons including drugs, plants and mushrooms, pesticides, snake and spider bites, stings from sea creatures and a wide variety of household cleaners and chemicals.

Board-certified medical toxicologists are available for immediate consultation 24 hours per day. These physicians provide the highest level of care in the diagnosis and treatment of acute and chronic poisonings. The toxicologists are certified by the American Board of Emergency Medicine and by the Medical Toxicology Sub-board of the American Board of Emergency Medicine and actively practice Emergency Medicine and Medical Toxicology. Education materials and safety brochures may be obtained by calling the Poison Prevention line at (704) 512-3795.

NC HAZARDOUS MATERIALS

Regional Response Team Program

The NC Hazardous Materials Regional Response Teams (RRT) have been operational since 1996. The seven (7) teams are located in Williamston, Wilmington, Fayetteville, Charlotte, Raleigh (RTP), Greensboro, and Asheville. The Hazardous Materials Regional Response Team program offers two types of assistance. The **FIRST** is **response** to a spill or release of hazardous materials. A twelve (12) person response team is available 24 hours per day. They can be accessed through the local county Emergency Management coordinator, through the 15 NC Division of Emergency Management Area Coordinators or their Eastern, Central, or Western Branch Offices. The **SECOND** type of assistance the Hazardous Materials Regional Response Team program provides is **technical information**. They can inform you of the hazards of specific chemicals. Calls requesting technical information should be placed to the specific RRT in that response territory. Team telephone numbers are listed below.

USING THIS BOOKLET

North Carolina agency information within this publication is listed alphabetically by county name. To locate a particular agency when the county is known, consult the county alphabetic section of the booklet. If the county is unknown, consult the North Carolina Hospital Index, then refer to the county section.

USING THE DIGITAL DIAL

"Digital Dial" is now seldom used and for the most part has become an obsolete technology. In the past, a digital dial on a VHF medical radio was connected so that it would key (turn on) the transmitter when the dial was rotated. The transmitter would then send a tone or whistle sound* that was interrupted sequentially corresponding to a numerical digit as the tone was transmitted. The transmitter and tone would remain on for a short period of time, during which time interval it was impossible to transmit voice over the radio. Prior to making a voice announcement, give the radio sufficient time to turn off as indicated by the radio transmit light, before pushing the transmit button on the microphone or handset and speak into the microphone to make a voice announcement.

***NOTE:** Usage of digital dial signaling is no longer recommended. Previously, the standard digital dial tone frequency for EMS radio systems used in North Carolina was 1500 Hz \pm 1% negatively keyed after the presence of tone.

USING THE DIAL CODES

After you locate the institution you need to contact and have determined the appropriate frequency and dial code or DTMF (touch tone) numbers, set your radio to the frequency and listen to be sure you will not interfere with a communication in progress. Then dial or touch the number as you would a telephone. Remember, however, that radio equipment does not usually ring or alert as a telephone does. After you have dialed, you must make a voice announcement addressing the agency you desire to contact to alert them to the call.

The following procedure is suggested:

1. Locate the required dial or DTMF code number.
2. Select the correct radio frequency or MED channel.
3. Monitor the frequency to be sure you will not interfere.
4. Encode the dial or DTMF code number (press the push-to-transmit button if required).
5. After waiting for the transmit light to turn off, make a voice announcement stating:
 - a. who you are calling, followed by
 - b. your identification and
 - c. the frequency you are calling on

For example, dial the number, then say:

"(name who you are calling) or hospital, this is (insert your name or identification) calling on (MED channel or frequency e.g. "340") How do you hear us? over."

After receiving an acknowledgement or response, state the reason for your contact and proceed with your business. When you have completed a call, always give your complete radio identification, your radio license call sign, and state you are "clear" the frequency.

HELISTOP/HELIPAD

Within the Hospital Agency listings, the  symbol indicates there is a helipad or heli-stop reported to be located at the hospital.

EMERGENCY MEDICAL DISPATCH PROVIDER

Within the Communication Center listings, the  symbol indicates the communication center is an approved EMD provider.

USAGE OF THE VHF FREQUENCIES

The VHF frequencies 155.280 MHz and 155.340 MHz have been selected as North Carolina statewide standard VHF frequencies. To assist in standardization of usage of these two frequencies, the following is required:

The frequency 155.280 MHz ("280") is designated primarily for mutual aid calls. It is preferred that the frequency not be used for dispatch purposes. For new or modified systems, it is suggested that an alternate frequency be selected for dispatching.

The frequency 155.340 MHz ("340") is dedicated to communication between ambulance treatment teams and hospital personnel directing treatment of patients prior to arrival at a hospital or treatment facility. This frequency is to be used only for this purpose. This frequency is for emergency communication associated with the care or transport of sick or injured persons. Information exchanged on this frequency must be pertinent to the treatment of the patient at the scene or while en route to the proper treatment center. This frequency is not to be used for dispatching, paging or interfacility communications.

The Office of Emergency Medical Services has technical staff available to assist you in selecting frequencies, equipment, or planning your communications system. Please feel free to contact the Office of Emergency Medical Services to discuss your plans.

USAGE OF THE UHF MED FREQUENCIES

The North Carolina Medical Communications Network (NCMCN) is a medical UHF radio system in the state. The NCMCN system uses a structured UHF frequency plan and has established one channel for all initial calling or contact. The state calling channel is MED 10. It is important that all users of the UHF system use this contact channel to prevent interference to medical communication that may be in progress on other UHF medical channels.

NCMCN LOCAL SYSTEM CALLING PROCEDURE

1. Set the radio channel selector to MED 10 and select the appropriate CTCSS "subaudible" tone squelch frequency (B through K) of the nearest MED 10 repeater (mobile relay) station.
2. In systems using UHF MED channels as the primary EMS communications system, call the county CMED and request a MED channel for communications with the hospital using the following sequence, filling in the blanks as appropriate: "_____ County CMED, this is _____ ambulance (rescue squad) calling on MED 10, Tone (B through K)." If appropriate give your geographic location.
3. When the CMED answers, notify them of your needs, the hospital you want to speak to. The CMED will assign you a working MED channel.
4. Switch your radio to the channel and tone assigned by the CMED and talk to the hospital.
5. When you have finished, clear the channel with your radio call sign and unit identifier.
6. Return to MED 10 and the proper tone and confirm to the CMED that the assigned MED channel is clear.

NCMCN WIDE AREA SYSTEM CALLING PROCEDURE

1. Select UHF MED Channel 10.
2. Select the proper CTCSS (sub audible) tone for the area repeater ("B" through "K") see the map on page 22 and the tones on page 156 of this booklet.
3. Refer to NCMCN DTMF CODE ASSIGNMENTS (page 17) for the agencies 5 digit DTMF Code number (right hand column on page).
4. Encode the 5 digit DTMF code number.
5. Listen for the "warble tone" to be received, which indicates you were decoded and have made a connection.
6. Allow 5 to 10 seconds for the alert tone at the called facility to stop. Then begin your communication.
7. Use the following sequence, filling in the blanks as appropriate: "_____ hospital, this is _____ (hospital, rescue squad, EMS) calling on MED 10, Tone (B through K)." If appropriate give your geographic location.
8. When the agency answers, notify them of your needs. When you have finished, clear the channel and always identify with your assigned call and unit identifier.

STANDARIZATION OF IDENTIFIERS

FREQUENCY IDENTIFIERS

The frequencies 155.340 MHz and 155.280 MHz are used throughout the state. Additionally note that many hospitals monitor both of these frequencies simultaneously, but do not have a means of determining which frequency they are receiving at any given time. It is therefore necessary for the calling station to make an announcement of what frequency is being used. The terms "frequency one," "F1," "channel one or two," "regional frequency," "local frequency," "area channel," etc., are not descriptive or standardized widely enough to be effective as identification of what frequency is being used. Likewise, these markings (REGIONAL, LOCAL, etc.) are not standardized and vary from radio to radio.

Since many times EMS units transfer patients to other counties, what is "F1" on your radio may not be "F1" in the other county or area. To standardize the identification of frequencies and totally identify the frequency being used, it is necessary to state the frequency in its entirety. This, however, is inconvenient. To help establish a universal statewide North Carolina standard, the following abbreviations should be used:

Frequency 155.280 MHz, say "280"
Frequency 155.340 MHz, say "340"

Every radio user in North Carolina using the above frequencies should know which of their frequencies is 155.340 MHz ("340") or 155.280 MHz ("280"). If you do not presently know which of your frequencies is 280 or 340, call your OEMS Regional Specialist listed in this booklet. They have special radio equipment to identify your frequencies and will be happy to help you.

RADIO IDENTIFICATION

To avoid confusion when communicating over the radio, especially when communicating to someone out of your normal operating area, always use your complete identification. It is not sufficient to simply state "This is Unit 12" or "Rescue One." Many counties have the same identifiers, and most hospitals communicate to more than one provider. It is very confusing to try to talk to two "Rescue One" units at the same time.

To help alleviate some confusion you should give your city or county name before your unit identifier. For example, say, "***This is Guilford County Rescue One,***" not simply "***This is Rescue One.***"

CHANGING OR UPDATING LISTINGS

Information in this booklet can be changed by contacting the Office of Emergency Medical Services by telephone, letter, or email.

When requesting information to be changed, please clearly state in your request the purpose and nature of the change, as well as any other descriptive information which may be helpful in keeping your information current and updated.

REQUESTING A DIAL CODE NUMBER

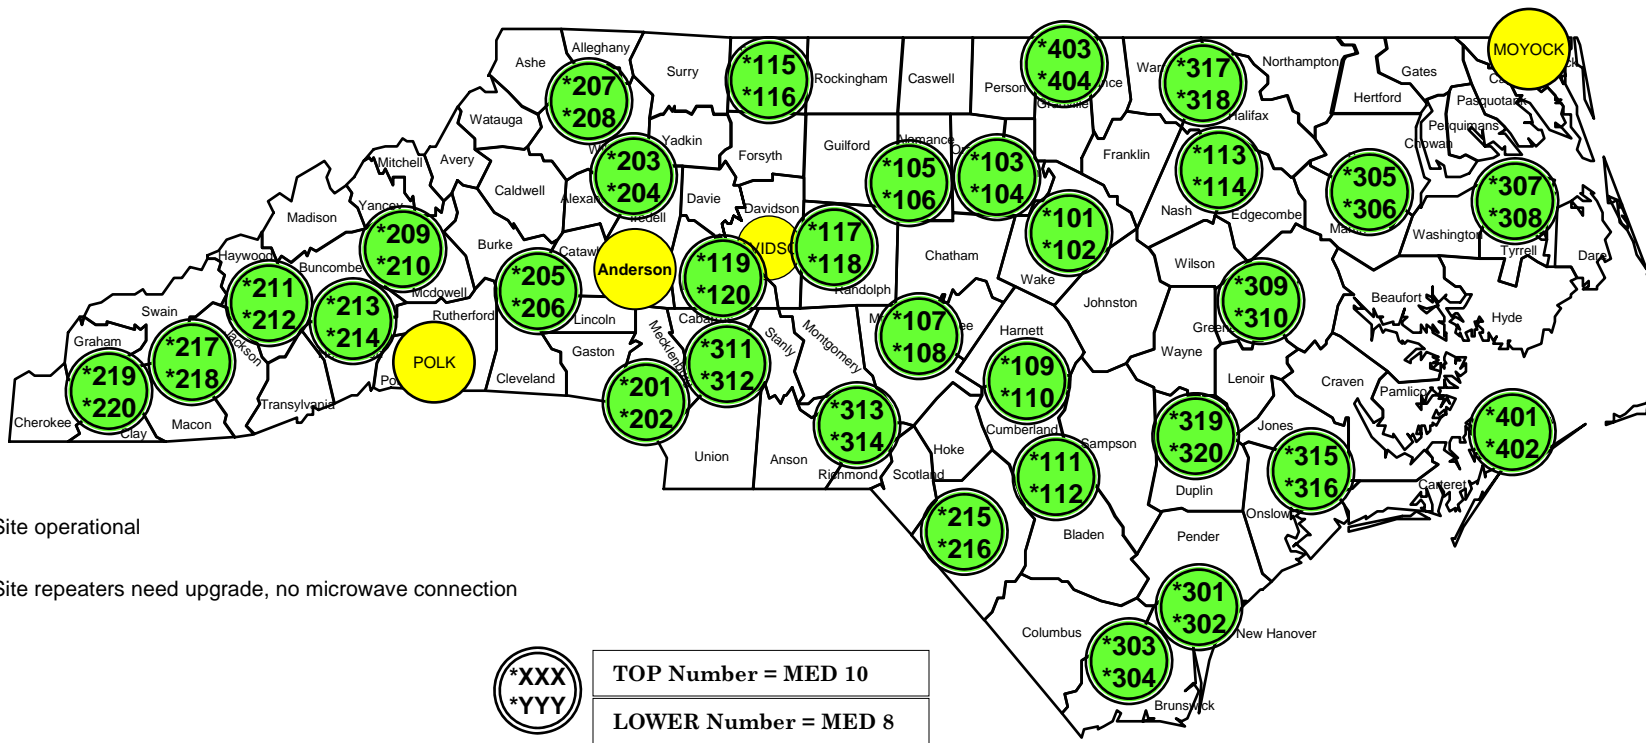

Dial Code (1500 Hz interrupted tone) is no longer used for establishing communications between units of different agencies. Most agencies have now converted to using multiple CTCSS tone access or DTMF (touchtone). Hospitals and public safety agencies within North Carolina are converting to a shared common 800 MHz trunked network. Information about the Voice Interoperability Plan for Emergency Responders (VIPER) is available from the document <http://www.ncdhhs.gov/dhsr/EMS/pdf/dtmfref.pdf> web site.

UHF MED COMMUNICATION

All UHF MED radio systems must be coordinated and supported by the North Carolina Office of Emergency Medical Services. The Federal Communications Commission will not issue radio licenses for these frequencies without a letter of support from the OEMS. All changes or modifications to medical radio systems or UHF MED networks must be filed with the Office of Emergency Medical Services so the systems may be coordinated and possible interference avoided. Please contact the Communications Section of the North Carolina Office of Emergency Medical Services with questions or for assistance in obtaining a radio license or implementing a medical radio system.

STONE CODED SQUELCH SYSTEMS

STONE CODE FREQUENCY CROSS-REFERENCE

Radio equipment manufacturers use different names or code identifiers to describe the continuous tone coded squelch systems (CTCSS) used in radio communications equipment. The various names and code plans sometimes make it difficult for a user to identify his own tone frequency. For example, Motorola Communications has trademarked the name "Private Line" or "PL" to describe their tone squelch system and General Electric uses the name "Channel Guard" or "CG." The tone systems are generally compatible if the tone frequency is the same.

The tone frequencies listed within this booklet are in Hertz (Hz). By using the cross-reference to convert your tone to hertz, you can determine if your radio is compatible with that of a different system.

For example, if you operate a Motorola radio and know your Private Line (PL) is "2A" your actual tone frequency is 114.8 Hertz. You can therefore communicate with any radio system with the same CTCSS tone.

Code	Tone	Code	Tone
1	100.0 Hz	7Z	186.2 Hz
1A	103.5 Hz	8	206.5 Hz
1B	107.2 Hz	8Z	206.5 Hz
1Z	100.0 Hz	9	229.1 Hz

AIR AMBULANCE SERVICES IN NORTH CAROLINA

There are nine medical helicopter air ambulance services functioning within North Carolina. All services will respond to a call for assistance received from a hospital, physician, nurse, pre-hospital care provider, law enforcement agency, rescue squad, fire department, or industrial representative.

BAPTIST AIRCARE - CRITICAL CARE TRANSPORT

SPONSORED BY: Wake Forest University Baptist Medical Center - Air Methods
SERVICE AREA: 150 mile radius of Winston-Salem without refueling
AIRCRAFT: EC135 P2 – N243AM
ADDRESS: 300 Medical Center Boulevard
Winston-Salem, North Carolina 27157
EMERGENCY TELEPHONE: (800) 336-6224 (NC & outside NC)
BUSINESS TELEPHONE: (336) 713-3110 and Communications center (336)716-3668
CALLSIGN: Dispatch: "Air Care Communications" – Aircraft: "Baptist Air Care"
RADIO FREQUENCIES: (mobile) Transmit 458.025; (mobile) Receive 453.025 MHz
2nd frequency: (mobile) Transmit 465.775; (mobile) Receive 460.775 MHz
CTCSS Tone 88.5 Hz
PROGRAM MANAGER: Ricky Harold
NURSING DIRECTOR: James Bryant, RN
MEDICAL DIRECTOR: Henderson McGinnis, MD
LEAD PILOT: Doug Mathews
Web: WWW.WFUBMC.EDU/aircare

UNC CAROLINA AIR CARE

SPONSORED BY: UNC Hospitals - Air Methods
SERVICE AREA: 150 mile radius of Chapel Hill without refueling
AIRCRAFT: BK117C - N117NC and BK117A - N118NC
ADDRESS: 101 Manning Drive - 8th Floor Neurosciences Building
UNC Hospital
Chapel Hill, North Carolina 27514
EMERGENCY TELEPHONE: (800) 247-6264 and (888)TEAMUNC (888)832-6862
BUSINESS TELEPHONE: (919) 966-3044
FAX NUMBER: (919) 966-8733
CALLSIGN: Dispatch: "UNC Flightwatch" - Aircraft: "Tarheel 1" and "Tarheel 2"
RADIO FREQUENCIES: "UNC Med Control" VIPER- AirCom
(mobile) Transmit 466.875; (mobile) Receive 461.875 MHz
2nd frequency: "Air Ops – 800 MHz"
(mobile) Transmit 458.025; (mobile) Receive 453.025 MHz
CTCSS TONE: 103.5 Hz
CHIEF MEDICAL DIRECTOR: Marshall McCoy, MD
PROGRAM MANAGER: Maggie O'Donnell modonnel@unch.unc.edu
Program Aviation Manager: Danny Struick dstruick@airmethods.com
CN IV: Tommy Hooks thooks@unch.unc.edu
LEAD PILOT Chapel Hill: Rex Bartles rbartles@airmethods.com

MARINE CORPS AIR STATION CHERRY POINT SEARCH AND RESCUE

SPONSORED BY: Department of Defense, United States Military(U.S. Marine Corps)
SERVICE AREA: 150 NM radius of MCAS Cherry Point (Havelock, NC) without refueling
AIRCRAFT: 3 aircraft - HH-46E helicopters
ADDRESS: Marine Transport Squadron One
Marine Corps Air Station Cherry Point
PSC BOX 8017
Cherry Point, NC 28533-0017
EMERGENCY TELEPHONE: (252) 466-5745/4434
BUSINESS TELEPHONE: (252) 466-7108
CALLSIGN: PEDRO
RADIO FREQUENCIES: 323.7, 158.4
PROGRAM MANAGER: Captain Brian Santucci, Search and Rescue Branch Head
SENIOR MEDICAL TECHNICIAN: Hospital Corpsman 1st Class George Marinez, U.S. Navy
MEDICAL DIRECTOR: Commander Joe O'Brien (Medical Corps, U.S. Navy)
LEAD PILOT: Captain Brian Santucci, Search and Rescue Branch Head

NOTE: PEDRO is an all-weather, IFR capable platform with a primary mission of search and rescue support for tactical aircraft operating from MCAS Cherry Point and MCAS New River. However, PEDRO can respond to civilian requests on a not to interfere basis. During regular working hours and most evenings PEDRO is on a five minute alert status from 06:30 am until all Marine Corps aircraft have secured flight operations. After normal hours, a one hour alert is maintained from recall to launch, including weekends and holidays. PEDRO aircraft have significant medical capabilities (oxygen, ventilator, EKG, portable defibrillator kit, trauma bags, etc.) and at a minimum are manned with state certified EMT-B personnel (EMT-I or EMT-P may be available dependent upon scheduled personnel). PEDRO can also transport civilian EMT-P personnel and/or flight nurses for patient care as required.

REQUESTING A HELICOPTER TRANSPORT

After determining that a helicopter mission is necessary, call the selected service at the telephone number listed on the following pages. Be prepared to:

1. Give your name, title, agency requesting service, and a call back telephone number.
2. Give the patient's name and approximate age if known.
3. Provide information on the type of response. E.g.: roadside pickup or hospital transfer.
4. Identify the pickup site; name the city and county; give the direction and distance from prominent visual landmarks in the area. Provide the geographic longitude and latitude if they are known.
5. Give the destination of the patient. For transfers between hospitals give the patient's name, the receiving hospital and physician's name.
6. Give the nature and extent of injury or illnesses.
7. Specify any special equipment or medical care needed en route; give a brief medical history.
8. Identify the radio frequency and call identification to be used for air-to-ground communications at the pickup site.
9. Give the weather conditions at the pickup site.

LANDING SITE

Landing requires an area 60x60 feet (100x100 feet at night or in high winds). The area must be flat and clear of wires, trees, signs or loose objects such as trashcans, twigs, or ambulance sheets. If at night mark the landing area with crossed LOW BEAM headlights or emergency beacons. If road flares are used, be sure they are firmly secured to the ground.

HELISTOP/HELIPAD

Within the hospital agency listings, the

symbol indicates there is a helipad or helistop reported to be located at the hospital.

MOBILE RADIO VHF & UHF "PACK CARRIED" FREQUENCY LIST of 02/11/08

This is a list of radio frequencies as reported by the county. The list is periodically updated and converted to a radio programming template. The "power on" code of the pack carried radio can be compared with the date above to determine the programming date. Note that both old and revised frequencies are included in this list so it can be used as a reference for all radios. The channel name is the first five letters of the county name. A number in a Channel Name is the order for update of a frequency for the county. The higher number is the more recent revision.
 In the Channel Name, F=Fire; E=EMS; C=Communications Center; A=All of the above. V=VHF; U=UHF.
